## BASEBALL

The majority of wagers on baseball are on the money line which is set as any other sport would be with a $\$ 100$ base on the listed price. However, players can still wager with a point spread, which is referred to in baseball as the "run line". Totals are also available as they would be in other sports.

## EXAMPLE:

|  | Team | Money Line | Run Line |  | Total |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Aug 2 | New York (NL) | +112 | -135 | +1.5 |  | $0-109$ |
| $7: 00$ PM | Chicago (NL) | -134 | +120 | -1.5 |  | $\cup-109$ |

In this example, Chicago is a - 134 favorite on the money line, which means for every $\$ 100$ the bettor wants to win on Chicago, they must wager $\$ 134$. On the money line, a bettor backing New York would be wagering $\$ 100$ for every $\$ 112$ they'd like to win on that team winning the game outright. The column to the right of that is the run line, which functions as the point spread in a baseball game. In this case, Chicago is favored on the run line by 1.5 runs, but a bettor wagering on them to win the game by 2 runs or more would get a return of $\$ 120$ in profit for each $\$ 100$ bet. Conversely, a bettor who wagered on New

York at +1.5 runs would risk $\$ 135$ for every $\$ 100$ they wanted to win. The total of 8.5 runs would function the same as it would in any other sport with bettors wagering on the total number of runs scored, including extra innings.

BASEBALL PARLAYS - Bettors may also string individual bets on baseball games together to create a single bet parlay. Parlays can include wagers on the money line, run line, or total. As always, the player cannot lose any of the individual bets contained in the parlay for the parlay as a whole to be a winner.
